EDUCATION

Bachelor of Science, Electrical Engineering

May 2027

Rose-Hulman Institute of Technology, Terre Haute, IN

Engineering Courses: Circuits & Systems, CT/DT Signals & Systems, Energy Systems, Linear Control Systems, Communication Systems, Electromagnetic Fields, Electromagnetic Waves, Electronic Device Modeling, Analog Electronics

Project/Lab-Based Courses: DC/AC Circuits, Intro to Software Development, Object Oriented Software Development, Junior Design, Digital Systems, Embedded Systems, Power Systems Analysis, Senior Design

SKILLS

Software: Python, Java, C, Verilog, Assembly, MATLAB, PSpice, Revit, AutoCAD, Microsoft Office

Lab & Technical: Oscilloscope, Power Supply, Function Generator, Digital Multimeter, Soldering, PCB Design

EXPERIENCE

DLR Group — Electrical Engineering Intern

06/2026 – 08/2026

- Developed lighting, power, and systems layouts and designs in Revit for 10+ K-12 and commercial projects, contributing to construction-ready documentation
- Created and updated panel schedules and switchboard documentation, balancing electrical loads across circuits
- Coordinated with mechanical, architectural, structural, and interior teams to resolve design conflicts and align lighting and power plans with overall building systems
- Participated in 6+ site visits to verify field conditions against construction documents, supporting accurate as-built design

Rose-Hulman Sports and Recreation Center — Building Supervisor

08/2025 – Present

- Promoted from General Staff to Building Supervisor in 2026 after one year in the role
- Supervise student staff and oversee building operations, including hourly facility rounds and opening/closing procedures
- Assist staff with complex situations and serve as the primary point of contact for building visitors

Gaylor Electric — College Craft Internship Program

05/2025 – 08/2025

- Installed and troubleshoot commercial electrical systems
- Wired control panels and gained hands-on experience with three-phase power systems

PROJECTS

Autonomous Vehicle Power Supply & Energy Management System - RHIT 500 Competition

2026

- Designed and developed a custom supercapacitor-based power supply, optimizing charging speed, energy storage, runtime, and system efficiency to meet competition requirements
- Selected components, designed the circuit, completed PCB layout, fabricated the board, and debugged hardware
- Collaborated with a team to integrate the power supply system with embedded controls, vehicle electronics, and data acquisition frameworks
- Validated system performance through iterative testing, documentation, and troubleshooting to ensure reliable operation under competition conditions

1986 Corvette Coupe Restoration

2021 – 2025

- Restored a 1986 Corvette alongside my father, completing mechanical and cosmetic repairs using service manuals and research
- Diagnosed and repaired electrical and mechanical faults, including wiring issues, ignition system components, EGR valve operation, and pop-up headlight mechanisms

ACTIVITIES

Rose-Hulman Women's Soccer — Member / Manager

08/2023 – Present

- Competed for Rose-Hulman Women's Soccer for 2 seasons until a career-ending injury
- Transitioned to team manager role, supporting coaching staff and serving as a steady, positive presence for teammates for the remaining 2 years
